Producer Link Setup

Finding Your Stage

The Golden Rule: Face the Light.

Always position yourself so that the room's main light source (like a window or lamp) is in front of you. This ensures your face is well-lit and vibrant.

Red Flag: The Silhouette.

Avoid sitting with a bright window directly behind you. This will turn you into a dark shadow and make it difficult for the audience to see your expressions.

If you're unsure about your spot, don't worry! Once you plug in, our Remote Producer will see exactly what the camera sees and can help you 'scout' the room to find the perfect angle before we hit record.

Finding Your Stage

Red Flag: The "Halo."

Try to avoid standing directly under a harsh overhead office light, which can create dark shadows under your eyes.

The "Smartphone Scout"

Before you set down the Producer Link, use your phone to find the best spot in the room. This takes 10 seconds and ensures you won't have to move the unit twice.

The next section will cover how you can use a laptop camera or phone to "scout" the spot before moving the Producer Link into position. By scouting your location you will minimize the risk of plugging everything in only to realize the background is messy or the lighting is poor.

Open your camera and flip it to the "Selfie" (front-facing) mode.

The "Smartphone Scout"

Hold your phone at eye level where you plan to sit.

- **Spin in a slow circle** while looking at your face on the screen.
 - **The Rule:** If you see a bright window or light *behind* you on the phone screen, keep turning! You want that light hitting your face, not the back of your head.

The Goal: Stop when your face looks brightest and there are no harsh shadows under your eyes.

****If you're unsure about your spot, don't worry! Once you plug in, our Remote Producer will see exactly what the camera sees and can help you 'scout' the room to find the perfect angle before we hit record.****

Setting Your Stage

A great video isn't just about you, it's about the space around you. To give your video a 'cinematic' feel, follow these two layout tips:

The 5-Foot Rule: Try to avoid sitting directly against a flat wall. If possible, place your chair about 5 feet away from the background. This creates a natural "blur" behind you that makes you pop on screen and keeps the focus on your message.

The Diagonal View: If you're in a smaller room, try aiming the unit toward a **corner** rather than a flat wall. This adds "leading lines" to the shot, which helps visually expand your space and achieve a more polished video aesthetic.

Setting Your Stage

Quick Background Checklist:

The "Head-Antenna": Take a quick look behind you. Is there a coat rack, a tall plant, or a lamp that looks like it's growing out of the top of your head? If so, shift the unit a few inches to the left or right.

The "Quiet" Background: A few books or a plant are great, but try to avoid high-traffic areas where people might walk behind you during the recording.

Perfecting Your Sightline

To ensure you look natural and engaged with your audience, the Producer Link should be positioned so the camera is at eye level. This creates a 'face-to-face' feel for your viewers.

The Desktop Setup: Place the unit on a sturdy desk or table. If the camera feels a bit low, you can use any stable surface, like a monitor riser or a few sturdy books, to bring the lens up to your eye line.

The Chair Factor: It's often easier to adjust your seat than the table! If your chair is height-adjustable, try lowering it slightly until you are centered in the frame.

The Golden Rule: You should be looking **straight ahead** into the teleprompter, not down at it. This ensures your posture looks great and your eye contact is perfect.

Don't worry about getting it pixel-perfect on your own. Once you've plugged in, your Remote Producer will help you find the 'sweet spot' for your height and framing before we start the session.
